

EUROPEAN COMMISSION
EUROSTAT

Joint Standard Quality Report for Labour Force Survey and Regional Labour Market Statistics

General information

This Quality Report is a combined effort of the units F2-Labour market statistics and E4-Regional indicators and geographical information to describe the quality of data collected by these units.

The aim of the quality reports is to establish the current level of knowledge in Eurostat about the quality of the statistical products. The results from the reports will be used for internal summaries of what is known about the quality and where there is lack of quality.

All available information that describes the quality of the product should be reported. If the information is extensive, references should be given for information more detailed. For lack of information on some quality aspects no complementary data has to be collected from the Member States.

The reports should be updated continuously and transmitted to the quality manager once a year.

The structure of the form is according to the quality concept for Eurostat.

Administrative information

Country	LUXEMBOURG
Statistical product (name)	Labour Force Survey and NUTS-3 level estimates of the labour force and the number of unemployed
Reference period	2009
Periodicity of the LFS statistics (monthly, quarterly, annual)	Quarterly
Periodicity of the NUTS-3 statistics	NA
Persons who have filled the present report	Marco Schockmel

Complete the abbreviations used in the report

Abbreviation	Explanation
CV	Coefficient of variation (or relative standard error)
Y/N	Yes / No
H/P	Households/Persons
M?	Member State doesn't know
NA	Not applicable/ Not relevant
UNA	Information unavailable
NR or blank	No response: Member State doesn't answer to Eurostat request for information
LFS	Labour Force Survey
NUTS	Nomenclature of territorial units for statistics or corresponding statistical regions in the EFTA and candidates countries
NC	No change from last report.

NB: if the information is not available or is not applicable/not relevant use the corresponding abbreviations. Blank fields will be considered as non-response.

The design and methods used for the LFS

<i>Coverage</i>	The sampling frame covers only private households in Luxembourg. The cross-border workers are not taken into account. The resident population comprises persons registered as residing in one of the communes.
<i>Inclusion/exclusion criteria for members of the household</i>	The household is defined as persons living in the same household, other than subtenants and military personnel returning home at the weekend.
<i>Questions relating to employment status are put to all persons aged ...</i>	The demographic part of the questionnaire is submitted to all the household members. But only the 15+ years old should be interviewed for the rest of questionnaire.
<i>Reference week</i>	The sample is divided into 53 reference weeks. Once a year, each selected household should be interviewed within 3 weeks from the reference week.
<i>Periodicity of the results</i>	The results are yearly. All the data continuously collected during 53 weeks are aggregated.

<i>Sampling design</i>	Simple random sampling through random digital dialing
<i>Base used for the sample (sampling frame)</i>	The set of all telephone numbers
<i>Last update of the sampling frame</i>	
<i>Primary sampling unit (PSU)</i>	The primary sampling unit is the private household selected by the phone number
<i>Final sampling unit (FSU)</i>	The final sampling unit consists of the persons living in the selected household
<i>First (and intermediate) stage sampling method</i>	-
<i>Final stage sampling method</i>	-
<i>Overall yearly sampling rate</i>	The yearly sampling rate is 3.9%.
<i>Size of the yearly sample</i>	The sample size is 19 229 persons.
<i>Stratification</i>	-
<i>Description of the rotation scheme</i>	No rotational scheme is applied. The 2010 data will be analyzed to determine how many households participated randomly in the 2009 and 2010 surveys

<i>Brief description of the method of calculating the weights</i>	Post-stratification at one level was performed by sex, age-group and nationality
<i>Is the sample population in private household expanded to the total population (including those in collective households)? (Y/N)</i>	N
<i>Gender is used in weighting (Y/N)</i>	Y
<i>Which age groups are used in the weighting (e.g., 0-14, 15-19, ..., 70-74, 75+)?</i>	The following age classes are used: 0-14, 15-19, 20-24, 25-29, 30-34, 35-39, 40-44, 45-49, 50-59, 60-64, 65+
<i>Which regional breakdown is used in the weighting (e.g. NUTS 3)?</i>	NA
<i>Other weighting dimensions</i>	The distinction between Luxembourgish and foreign person

<i>Data collection methods, brief description</i>	All the interviews are performed by phone. One interview (covering the core variables as well as the ad hoc module variables) lasts in average 10 to 15 minutes per interviewed person.
<i>Participation is voluntary/compulsory?</i>	Voluntary

Publication thresholds, annual estimates

<i>Limit, below which figures cannot be published</i>	500
<i>Limit, below which figures must be published with warning</i>	1200

Use of subsamples to survey structural variables (wave approach)

Only for countries using a subsample for yearly variables

<i>Wave(s) for the subsample</i>	NA
<i>Are the 30 totals for ILO labour status (employment, unemployment and inactivity) by sex (males and females) and age groups (15-24, 25-34, 35-44, 45-54, 55+) between the annual average of quarterly estimates and the yearly estimates from the subsample all consistent? (Ref.: Commission Reg. 430/2005, Annex I) (Y/N)</i>	NA
<i>If not please list deviations</i>	NA
<i>List of yearly variables for which the wave approach is used (Ref.: Commission Reg. 377/2008, Annex II)</i>	NA

Publication thresholds, annual estimates (wave approach) if different from full sample thresholds

<i>Limit, below which figures cannot be published</i>	NA
<i>Limit, below which figures must be published with warning</i>	NA

Brief description of the method used to produce data on

<i>Regional level of an individual record (person) in the national data set</i>	NA
<i>Lowest regional level of the results published by NSI</i>	NA
<i>Lowest regional level of the results delivered to researchers by NSI</i>	NA
<i>Brief description of the method which is used to produce NUTS-3 unemployment and labour force data sent to Eurostat?</i>	NA

Table 1.2.1 Relevance of the main LFS statistics at national level

	For policy makers (a)		For social actors (b)		For the media (c)		For researchers and students (d)		For enterprises (e)		Comments
	high	low	high	low	high	low	high	low	high	low	
Total Employment (levels)		x		x		x		x		x	As more then 40% of the employment is occupied by cross border
Total Employment rate		x		x		x		x		x	workers, registered data from the social security are used, as
Part-time employment		x		x		x		x		x	cross border workers are not included in the LFS
Temporary employment		x		x		x		x		x	
Employment by socio-demographic breakdown (age, sex, education)	x		x		x				x		educational level is not included in the registered data
Employment by territorial (NUTS 2 or NUTS 3) breakdown	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	
Employment by economic activity (NACE) breakdown		x		x		x		x		x	
Hours actually worked		x		x		x		x		x	
Total Unemployment (levels)		x		x		x		x		x	For unemployment registered data from the Public Employment
Total Unemployment rate		x		x		x		x		x	Service is normally used
Long-term unemployment		x		x		x		x		x	
Youth unemployment		x		x		x		x		x	
Unemployment by socio-demographic breakdown (age, sex, education)		x		x		x		x		x	
Unemployment by territorial (NUTS 2 or NUTS 3) breakdown	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	

(a) i.e. if the statistic is used as policy target or if it is used in official studies **influencing policy making**

(b) i.e. if the statistic is used by employers associations, trade unions, lobbies, at national or regional level, for their **decision making**

(c) i.e. if the statistic **is mentioned** in national or regional media, specialised or for general public

(d) i.e. if the statistic is used by academics **for scientific research** (e.g. appears in scientific publications) or by students

(e) i.e. if the statistic is used by enterprises **for own market research activities or for consultancy services** in the information sector

Table 2.1.1 Coefficient of variation (CV) Quarterly and annual estimates

For the calculation of the CV it is necessary to take into account the design effect.

Quarter	CV of national quarterly aggregates (in %)				
	Number of employed	Number of part-time employed	Number of unemployed	Rate of unemployment	Average number of hours actually worked per week
1	1.18	4.59	10.44	10.26	1.25
2	1.12	4.56	10.26	10.17	0.98
3	1.05	4.37	10.59	10.53	1.46
4	1.03	4.19	9.06	8.97	1.10
Annual	0.98	2.44	5.37	5.20	0.64

Reference on software used :	Stata 10
Reference on method of estimation:	Taylor

Table 2.1.2 Coefficient of variation (CV) Annual estimates at NUTS-2 Level

For the calculation of the CV it is necessary to take into account the design effect.

PLEASE DO NOT ADD OR DELETE ROWS

NUTS-2		CV of regional (NUTS-2) annual aggregates (in %)				
Regional Code	Region	Number of employed	Number of part-time employed	Number of unemployed	Rate of unemployment	Average number of hours actually worked per week
		0.98	2.44	5.37	5.20	0.64

Table 2.1.3 Coefficient of variation (CV) Annual estimates at NUTS-3 level

Only to be completed by countries using the LFS to produce NUTS-3 level data for Eurostat

PLEASE DO NOT ADD OR DELETE ROWS

Region (NUTS-3)		Sample size (number of responding persons)	CV of regional (NUTS-3) annual aggregates (in %)		
Regional Code	Region		Number of persons in the labour force	Number of unemployed	Unemployment rate

For the calculation of the CV for NUTS-3 regions, the national design effect can be used as an approximation of the true regional design effect. Please indicate if this approximation is used (Y/N):	

Table 2.2.1 Frame quality, coverage rates and methodological notes

Give quantitative information (the rates of undercoverage, overcoverage and classification errors of the statistical units) and brief comments on the main problems affecting frame quality

	Rates	Description of overcoverage, undercoverage and classification errors and their impact on estimates
Under-coverage	UNA	Housholds with no telephone will not be in the frame
Over-coverage	UNA	
Classification errors	UNA	
Reference on frame errors	UNA	

Table 2.2.2.a Errors due to the reporting units and the interviewers

Give brief comments on the assessment of errors due to:	Reporting unit	UNA
	Interviewers	UNA

Table 2.2.2.b Errors due to the medium (questionnaire)

Date of the last update of the questionnaire	yearly update
Date of the last pilot survey in order to test the questionnaire	UNA
Number of respondents to the pilot survey	UNA
Report from cognitive laboratory available (Y/N)	N

Table 2.2.2.c Are there any methodological notes on the measurement errors?

Main references	UNA
-----------------	-----

Table 2.2.2.d Main methods of reducing measurement errors

Error source	Brief comments
Respondent	As citizenship of the contacted reference person is usually known, the interviewers were chosen according to their language skills when possible
Interviewer	A specific training course is given to the interviewers (purpose and methodology of the survey, codification and classification to use, sensitive questions, etc.). Interview calls are monitored and controlled to allow continued improvement.
Questionnaire	Every year, the questionnaire is revised. Modifications are made if necessary. Interviews are carried out by CATI, which allows interactive checking of the answers.
Other	Plausibility and consistency checks are made at the end of the survey. Corrections, if needed, are made before releasing the data.

Table 2.2.2.e Number of interviewers per quarter

	Face to face	Telephone
Average number of interviewers per quarter (full time equivalent)	NA	35

Table 2.2.3a Information available about data capture errors and the error rates

NA

Table 3.2.c Ways for improving timeliness

To be completed only in case of late delivery of NUTS-3 level data on unemployment and labour force.

<i>Describe ways for improving timeliness</i>
NA

4.1 A list of type and frequency of publications

Main results (activity and employment rate by age classes, gender and citizenship) of annual LFS data with comments are published by STATEC in:

1. Note de conjoncture : La situation économique au Luxembourg - Évolution récente et perspectives (annual publication)
2. Bulletin du STATEC (studies of general interest).

4.2 Conditions of access to data

Means, support, marketing conditions, possible restrictions, existing service-level agreement, etc.

Tables are provided to users. Restricted access to anonymised micro-data is given to researchers under secured conditions within Statec.

4.3 Accompanying information to data

Documentation, explanation, quality limitations, graphics etc.

Documentation and methodological explanations are provided to the users via a number of media: paper, files, email and by phone.

4.4 Further assistance available to users

See 4.3

4.5 Possible improvements, compared to the previous situation.

Table 5.4.a Coverage of the 53rd week of 2009

The sample of Q4 evenly spread over 14 weeks

Questionnaire on the coverage of variable INCDECIL

DATA COLLECTION

Q1. Is information on monthly pay from main job collected via interview or derived from registers?

1. Via interview
2. From registers

X

Q2. If the information is collected via interview (Q1=1), is it collected as exact values or in bands?

1. Always as exact values
2. Always in bands
3. First the exact value is asked. The bands are proposed if the exact value is not given

X

Q3. Does the collected information refer to net or gross pay?

1. Net pay
2. Gross pay

X

Q4. Does the collected information refer to the last monthly pay before the reference week, or does it refer to the "usual" or "average" pay?

1. Refers to the last monthly pay
2. Refers to the "usual" or "average" pay

X

IMPUTATION

Q5. If data are collected via interview (Q1=1), is unit non-response to INCDECIL imputed?

1. Yes
2. No

X

Q6. If unit non-response to INCDECIL is imputed (Q5=1), describe the imputation source and method

--

DECILES

Q7. How are the deciles derived?

1. From external sources (e.g. EU-SILC, SES, registers, old LFS results, etc.)
2. From the distribution of the values collected via interview

X

Q8. From which external source are the deciles derived (e.g. EU-SILC, SES, registers, previous LFS results, etc.)?

--

Q9. If the deciles are derived from external sources (Q7=1), are they used to determine the bands for the data collection?

1. Yes
2. No, data are collected as exact values and then assigned to the deciles derived from external sources

⇒ Go to Q3

⇒ Go to Q7

⇒ Go to Q8

End of questionnaire

Table 6.1 Coherence of LFS data with National Accounts data

	<i>Description of difference in concept</i>	<i>Description of difference in measurement</i>	<i>Give an assessment of the effects of the differences</i>	<i>Give references to description of differences</i>
<i>Total employment</i>	Although employment in LFS and National Accounts (NA) are both in line with the ILO guidelines (XIII. ICLS, Geneva 1982), the following conceptual differences are relevant: - 1. Residence (LFS) vs. domestic Concept (NA). Many non-resident workers are coming to Luxembourg from bordering countries. - 2. Inclusion (NA) / Exclusion (LFS) of the institutional population.	LFS is a sample survey (primary statistics), sampling errors occur. Employment in NA is based on all statistical information available (secondary statistics); additional estimates are made for under-coverage of employment in basic sources (e.g. for hidden economy). Estimation errors may occur.	1. Non resident employees represent about 40% of total employees (domestic concept) 2. Census 2001 registered 7500 persons living in non-private households	Indicateur rapide série L (emploi salarié) Note de conjoncture Bulletin du STATEC N°5-2008 Le chômage au Luxembourg: Une approche intégrée*

<i>Number of hours worked</i>	UNA	UNA	UNA	UNA

Table 6.2 Coherence of LFS data with Business statistics data

	<i>Description of difference in concept</i>	<i>Description of difference in measurement</i>	<i>Give an assessment of the effects of the differences</i>	<i>Give references to description of differences</i>
<i>Total employment</i>	STATEC produces a range of different business statistics. There are various differences in concepts and measurement when compared with the LFS (periodicity, sample survey or total enumeration, coverage of employment and sectors of economy, inclusion/exclusion of small enterprises, etc.).		UNA	Note de conjoncture
<i>Total employment by NACE</i>			UNA	Bulletin du STATEC N° 5-2008 Le chômage au Luxembourg:
<i>Number of hours worked</i>			UNA	

Table 6.3a Coherence of LFS data with registered unemployment

<i>Description of difference in concept</i>	The registered unemployment is a legal concept that differs from the ILO unemployment definition. In the LFS, the ILO-unemployment concept is used.
<i>Description of difference in measurement</i>	<p>In the LFS the measurement of unemployment is made on the declaration of persons living in private households, institutional households are not covered. Sample error influences LFS-results.</p> <p>Registered unemployed who are not ILO-unemployed:</p> <p>Registered unemployed who do not meet the availability criterion used in the LFS;</p> <p>Registered unemployed working more than 1 hour during the reference week;</p> <p>Registered unemployed who do not actively search for a job.</p> <p>ILO-unemployed who are not registered unemployed (especially young people): not registered unemployed at the public employment offices but using other job search methods;</p> <p>Unemployed 65 years and over.</p>
<i>Give references to description of differences</i>	<p>Note de conjoncture 1/2009: Economie luxembourgeoise en 2008, chap. 6</p> <p>Note de conjoncture 1/2008: Economie luxembourgeoise en 2007, chap. 6</p> <p>Bulletin du STATEC N°5-2008/Le chômage au Luxembourg: Une approche intégrée*</p>

Table 6.3b Assessment of the effect of differences of LFS unemployment and registered unemployment

	<i>Give an assessment of the effects of the differences</i>
<i>Overall effect</i>	<p>Number of unemployed persons: LFS : 10 387</p> <p>Registered (annual average): 9 916</p>
<i>Men under 25 years</i>	registered: 885 / LFS: 1038
<i>Men 25 years and over</i>	registered: 4317 / LFS: 3862
<i>Women under 25 years</i>	registered: 839 / LFS: 1734
<i>Women 25 years and over</i>	registered: 3875 / LFS: 3753
